Hardware Installation

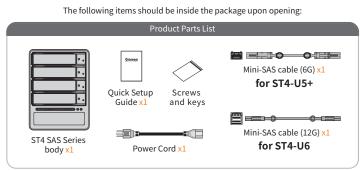

Please follow the steps below to complete the ST4 SAS Series hardware setup process:

- When you open the package, please immediately check the product and included parts for any damage or missing parts. If there is a problem with the product or included parts please contact your supplier immediately.
- Place the device on a flat, even surface. Make sure that the cooling fan is not blocked and there is sufficient surrounding space for cooling. (Keep away from water or other environments that may cause product damage).
- Please insert the pin included with the parts pack into the keyhole to release the HDD enclosure handle and remove the HDD enclosure.
- 4. Place the hard disk in the HDD enclosure and secure it in place with the included screws; this will prevent damage to the hard disk from external vibration.

Note: Please avoid using hard disk drives from different manufacturers or different models from the same manufacturer as this may impact system performance.

- 5. Once the hard disk is installed, slide the enclosure into the system and close the handle.
- Select the appropriate cable from the accessories pack depending on the interface. Connect the ST4 SAS Series backplate connection port to the corresponding port on the computer.
- Connect the AC Power cable to the ST4 SAS Series. Plug the connector into the power socket then start the system.
- Your operating system will automatically detect available capacity once the device finishes booting. Once the device has been detected, please follow instructions given by the operating system and format the system. Once the hard disk has been formatted, the ST4 SAS Series system can be used.

Important Notice

- The ST4 SAS Series allows you to install up to 4 hard drives of different models and capacities. They are not required to simultaneously have all 4 hard drives installed in order for the system unit to operate. You may use one first and add more drives later accordingly to your preference.
- Although ST4 SAS Series allows you to install either SAS or SATA drives, it is recommended to check whether the mini-SAS host adapter you're using is downward compatible with SATA drives. Also note that the throughput performance may vary if SAS and SATA drive are installed.
- Please make sure that the hard drives are free from bad blocks or defects prior to installation in order to avoid system crashes or data loss.
- Whenever turning off or unplugging the ST4 SAS Series from your computer system becomes necessary, always remember to safely remove it from your operating system first.
- When the ST4 SAS Series is connected to the computer system, it's prohibited to remove, insert or swap the hard drive while data transfer is being performed.
- 6. If you will be incorporating either software or hardware RAID functionality to operate with the ST4 SAS Series, it is important to understand the RAID level and its component that will be incorporated and the precautions to take as each RAID level and component may function differently and contains various limitations.
