SOHORAID ST4-TB-B

4-Bay 2.5"/3.5" SATA III HDD/SSD Hardware RAID Storage

2 Thunderbolt™ 2 ports, Hot-Swappable Drive

A software RAID storage system is unable to overcome the problems associated with cross-platform usage. It is only through hardware RAID controller chipsets that users can use these hard drives concurrently in Mac or Windows computers. With the ST4-TB's built-in hardware RAID controller chipset and Thunderbolt™ 2 host interface, not only does it promise high transmission speed, it also eliminates the cross-platform usage issues associated with JBOD or RAID 0/1/10 setups. Also, with hardware RAID, all data is computed and processed by the built-in CPU. With such advantages, your computer performance can be focused on running the software and work, instead of handling the storage device's transmission issues. (RAID storage is used between Mac OS and Windows PC platforms and needs to use the same file format, for example: exFat file format).
